No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SSSSSXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC polymerase chain reaction (PCR) primers, oligoners, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC for identifying expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC diagnostics, forensics, gene mapping, identification of mutations in CC diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and CC anino acid sequences. ABG00010-ABG30377 represent novel human CC CC Note: The sequences of the invention.

CC Specification, but was obtained in electronic format directly from WIPO at figure as a sequences.

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

Cardiovascular system antigens and their cassociated polymucleotides are useful in the diagnosis, treatment and cc prevention of various types of disorders in e.g. humans, mice, rabbits, cc goats, horses, cats, dogs, chickens or sheep. A pathological condition of can be determined by detecting the presence or absence of a mutation in a cc cardiovascular system antigen polynucleotide. The treatable disorders cc include autoimmune diseases such as rheumatoid arthritis, the presence of a mutation in a cc cardiovascular disorders such as eardiac arrest, cerebrovascular cardiovascular disorders such as cardiac arrest, cerebrovascular cc disorders such as cerebral ischaemia, nervous system disorders such as coular disorders such as corneal infection, endocrine disorders such as corneal disorders such as glomerulonephritis and crespiratory disorders such as asthma and pleurisy. The polypeptides can constant and orders such as asthma and pleurisy. The polypeptides can be used to aid wound healing, to prevent skin aging due to sunburn, constants and constants and constants and constants and constants and constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                рь

The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital;
                                       The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.
                                                                                                   Claim 11;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used therefore treat p. acnes infections. The antibodies may also be used diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the prin specification, but was obtained in electronic format directly from WI specification, but was obtained in electronic format directly from WI specification, but was obtained in electronic format directly from WI specification, but was obtained in electronic format directly from WI specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             tches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention

conjugations at least 80% identical to the ORFI-ORF4334 (collectively correferred to as ORFX) proteins, polynucleotides at least 85% identical to the ORFI-ORF4334 (collectively correferred to as ORFX) proteins, polynucleotides at least 85% identical to the ORFX nucleic acid sequences, vectors and host cells comprising ORFX correction for ORFX proteins, methods of detecting ORFX proteins, antibodies goolynucleotides, methods of screening for modulators of ORFX proteins, and methods of screening individuals for a predisposition or activity, and methods of screening individuals for a predisposition to an activity, and methods of screening individuals for a predisposition, and corrected disorder. The ORFX proteins of the invention have a wide range of biological activities, such as cytokine, cell proliferation, cell differentiation, immune modulation, haematopoiesis regulation, cell differentiation, haemostatic activity, thrombolytic activity, chemotactic/correceptor/ligand, antiinflammatory activity, thrombolytic activity, and may also be involved in the determination of boddily characteristics, fertility and behaviour. ORFX proteins, currently activity and behaviour of the determination of concers, colleged and antibodies may be used in the treatment of cancers, colleged and antipodies and benign tumours.
                                                        neurological disorders such as epilepsy and Alzheimer's disease, concerning the disorders such as epilepsy and Alzheimer's disorders related to cardiovascular diseases, immune system disorders, disorders related to corgan transplantation, disorders of tissue growth and regeneration, concerning diseases, and infectious diseases caused by viral, bacterial, congress expenses, and infectious diseases caused by viral, bacterial, congress and other pathogens. ORFX nucleic acids may also be used as a congress of primers and probes, in the detection of ORFX genomic sequences congress, in genetic diagnosis, and in forensic biology. The ORFX concerning in genetic diagnosis, and in forensic biology. The ORFX concerning and additionally be used to produce transgenic animals concerning and additionally be used to produce transgenic animals concerning and in drug screening. The ORFX proteins may also be used as immunogens to generate specific antibodies, which are useful in the concerning concerning the ORFX associated diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      designated ORF (open reading frame) 1-4534, and sequence ABN79587 represent cDNAs encoding them. The invention al polypeptides at least 80% identical to the ORF1-ORF4534
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           hyperproliferative disorders and disorders related to organ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           transplantation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABB31028-ABB35561 represent 4534 novel human proteins d ORF (open reading frame) 1-4534, and sequences ABM/5054-represent cDNAs encoding them. The invention also encompasses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2370; 2508pp; English

AAB87414-AAB87454 represent human secreted protein fragments. The genes CC and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene CC therapy. Pathological conditions can be diagnosed by determining the CC amount of the new protein in a sample or by determining the presence of CC 2 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tumours, foetal and developmental CC allergies, neurological disorders (e.g., Alzheimer's diseases, CC allergies, and infections. The proteins can also be used to aid wound the pathelial cell proliferation, to prevent skin aging due to gustrointestinal disorders, pregnancy-related disorders, endocrine thealing and epithelial cell proliferation, to prevent skin aging due to constact ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

CC allergiating symptoms associated with the disorders mentioned above, and confidency (CC indunosorbent assay (ELISA). The present sequence represents a human cCC indunosorbent assay (ELISA). The present sequence represents a human cCC indunosorbent assay (ELISA). The present sequence represents a human cCC indunosorbent assay (ELISA). The present sequence represents a human cCC indunosorbent assay (ELISA).

                                                                                                                                                                                                                                                                                                The present invention relates to albumin fusion proteins comprising a therapeutic protein x and human albumin (HA, also known as human seru albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and
